# ARFNET2 deployment

After the disastrous ISP schism

# Masterplan

Stage 1: very safe - Close all ports - Nuke (or stop) all old VMs (exclude OPNSense) - Make DMZ - Make new basic VMs (cloning deb12 template) - Open basic ports

Stage 2: new services - IONOS VPS for mail - Some new very safe services - HE IPv6 tunnel - Own authoritative nameservers for domain zone

Stage 3\*: finally - Another VPS in unknown provider for - Tor - Reverse-proxying the media library - PHP on main site with more web services from scratch, hopefully secure - More new services

## Domain

arf20.com

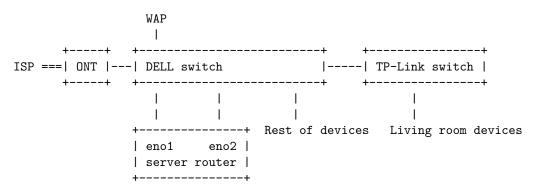

Registrar: namecheap

# Name sever glue records at registrar

Nameserver	Name	IP
NS1	ns1.arf20.com	2.59.235.35 2001:470:1f21:125::13
NS2	ns2.arf20.com	$5.250.186.185\ 2001{:}\mathrm{ba}0{:}210{:}\mathrm{d}600{:}:1$

# Networking

#### Hardware

- 1000BASE-T
- = GPON fiber

DELL PowerConnect 5424 switch Port assignents

port	endpoint	options
g2	ONT	VLAN access 2
g4	server eno2 WAN	VLAN access 2
g6	test2	VLAN access 2
g3	WAP	VLAN access 5
g5	PC	VLAN access 4

port	endpoint	options
g7	Living R.	VLAN access 5
g9	server eno1 DMZ+LAN	VLAN trunk 4, 5
g15	test4	VLAN access 4
g17	test1	VLAN access 1
g19	test5	VLAN access 5
g21	iDRAC	VLAN access 4
g23	printer	VLAN access 4

## Management

• interface vlan 4: 192.168.4.2/24 gw 192.168.4.1

#### Public IPs

AVANZA\_STATIC: 2.59.235.35
AVANZA\_CGNAT: dynamic

• HE v6 tunnel: 2001:470:1f20:125::2

• IONOS VPS: 5.250.186.185 2001:ba0:210:d600::1

#### Gateways

• AVANZA

WAN\_STATIC: 2.59.235.1WAN CGNAT: dynamic

• HE v6: 2001:470:1f20:125::1 via 216.66.87.102

## Physical and Logical Networks

name	VLAN	net	desc
WAN	2		
DMZ	4	192.168.4.0/24 2001:470:1f21:125::/64	Services
LAN	5	192.168.5.0/24	Clients
VPN		10.5.0.0/24	Wireguard clients

## Firewall

## **Interface Rules**

- WAN\_CGNAT in
  - deny \*
- $\bullet~$  WAN\_STATIC in
  - − allow from \* to {services} → NAT rules
- DMZ in
  - deny from DMZ net to LAN net
  - allow from DMZ net to firewall
  - allow from DMZ net to \* gw WAN\_STATIC
- LAN in
  - $-\,$  allow ICMP from LAN net to firewall
  - allow IP DNS from LAN net to firewall
  - allow from LAN net to DMZ net
  - allow from LAN net to \* gw WAN\_CGNAT

IPv4 NAT Rules

Service	Customer	IPProto	Ext Port	Host	Re Port

Web		TCP	web	80,443

## Hosts

- server DELL PowerEdge R720 running Proxmox PVE . . .
- $\bullet\,$ mail IONOS VPS running Debian 12 5.250.186.185 2001:ba0:210:d600::1

# Management

- OPNSense router DMZ.1
- DELL switch DMZ.2
- TP-Link WAP LAN.2
- Proxmox hypervisor DMZ.4
- DELL server iDRAC DMZ.5
- HP printer DMZ.7

## server VMs and services

server runs Proxmox PVE.

All VMs are Debian 12 (templated) with wazuh agent

## proxmox DMZ.4 (hypervisor)

- SSH
- Proxmox management interface: 8006
- smartmon + node exporter :9100
- sensor exporter\*
- NUT Network UPS TOols daemon (and proper UPS)\*

#### router DMZ.1

- (routing/firewalling)
- SSH
- DHCP
- unbound DNS
- OpenVPN
- WireGuard
- IPsec\*
- ntopng:3000
- telegraf note: editing config via webfig breaks (timeout and unbound config)

#### nas DMZ.6

RAID attached here (with the grey stuff) (local only)

- SSH
- NFS
- Samba SMB\*
- MiniDLNA\*
- FTP
- qBittorrent-nox
- $\bullet$  jellyfin

#### web DMZ.9

- SSH
- cerbot
- nginx (status at :8080)
- fastcgi PHP
- mariadb SQL
- nginx-prometheus-exporter:9113
- prometheus:9090
- telegraf
- influxdb:8086
- grafana :3000
  - Proxmox
  - nginx
  - iDRAC
- zabbix\*
- netbox\*
- fcgiwrap
- git-http-backend git smart http server CGI
- gitd git daemon
- cgit web frontend for git
- phpBB forum software
- Jekyll blog static site generator thing
- opentracker? bittorrent tracker\*

• gophernicus - gopher server\*
